

Not only do we have xm in our trucks we also have it in our house. My husband and I own a business where we and our employees travel through out New England. Due to the nature of our business we need to know the weather and traffic at all times. We also enjoy listening to the wide range of programming xm provides. We invested in xm because of their programming and the services they provide us. We have yet to find a local station that can provide programming and services that xm's technology allows. I find it troublesome we may lose such great programming just because NAB feels threatened and can not compete with xm's technology. I, a US citizen, am tired of losing the right to do something or receive a service we chose just because someone else feels threatened.
